FORM 2

THE PATENTS ACT 1970

39 OF 1970

&

THE PATENT RULES 2003

COMPLETE SPECIFICATION

(SEE SECTIONS 10 & RULE 13)

1. TITLE OF THE INVENTION

QUICK FILL USING SKY LOCKER AND DIGITAL STORAGE

2. APPLICANTS (S)

NAME	NATIONALITY	ADDRESS
UJWAL KUMAR MAHATO	Indian	Sabra more chandankiyari bokaro jharkhand 828134
Dr.SAROJINI YARRAMSETTI	Indian	Associate Professor, Department of Computer Science and Engineering, Faculty of Engineering and Technology, Jain (Deemed to Be) University, Jakkasandra, Post, Bengaluru, Karnataka 562112
RANI KUMARI	Indian	khushboo fashions, b.h.road, gauribidanur- 561208, Chickaballapur district, Karnataka
Dr. VINUTHA N	Indian	Assistant Professor, Hyderabad Institute of Technology and Management

2. PREAMBLE TO THE DESCRIPTION

COMPLETE SPECIFICATION

The following specification particularly describes the invention and the manner in which it is to be performed

TITLE: QUICK FILL USING SKY LOCKER AND DIGITAL STORAGE

ABSTRACT:

Manual uploading the documents one by one on any website takes a lot of time and also, we find sometime session expires while uploading. In some cases, the websites have some specific range of file size. So, again user use a different platform to make the required file size and upload it. The currently existing system is the SSO (Single sign-on) which deals with the authentication purpose, but in this new Quick Fill system will be quite similar to the SSO system. This Quick Fill implements a proper document uploading system that will convert the main file to the required document files size and required pixels to upload. Working of this invention will require a digital storage. Using the digital storage, the automated uploading of documents will be done with secured authentication of users. This invention can be used on the online job application website, school admission websites, and many more places where form filling work is done. It will enable the users to upload their details and documents in just one click. Automate the uploading of documents and details in the websites. No more session expiring while uploading documents. Automate and change the file size to websites required file size. Single click to completely fill the form including all the documents and data.

Using this Quick Fill, we can upload the documents in a single click that leads time efficiency, less effort for uploading, can be accessible from any device with user's authorization and verification work for other websites will be easy due to usage of digital memory.

DESCRIPTION:

Google Drive provides 15 gigabytes (15GB) of free storage space for uploading and storing files from your PC. You may store two sorts of items on Google Drive: images and documents. Editable files, such as Microsoft Office documents, PDFs, and other text-based documents. Non-editable files, such as music, movies, compressed archives (.zip files), and the vast majority of many other records. You can also preview a variety of file kinds even if you don't have the necessary software installed on your computer. You can use Google Drive to examine a Photoshop file, for example, even if you don't have Photoshop installed on your present computer. Sign into Google Docs to access your files or folders from every device, elsewhere in the world. The only prerequisite is that you have access to the Internet. Allow friends, family members, or coworkers to see files in the Google Docs Viewer via sharing files and folders. Convert files to Google Docs format and edit them online with others. Browse and distribute pictures and videos that you've uploaded. Convert files to Google Docs format and edit them

online in a collaborative manner. You may see and share photos and videos that you've uploaded.

Example: If a user is applying for a job application in any random company. So, for that the user went to website for filling the application form.

But there he finds while filling the form lots of documents like Aadhar card, school mark sheets, college mark sheets, certificates, resume, etc. are to be uploaded and all these documents have some different file size range. The document will only be uploaded if the document size lies in that range.

And if the user uploads the papers in the required file size and fills out all of the required information. Then, every now and then, the user's session expires, causing them to re-upload their files.

This Quick Fill includes a document uploading mechanism that converts the primary file to the needed document file size and pixels before uploading. The operation of this technology will necessitate the use of digital storage. The automated uploading of documents would be done with secured user authentication using digital storage. This invention can be used on online job application websites, school admissions websites, and a variety of other places where people fill out forms. Users would be able to upload their information and documents with only one click. Uploading documents and information to websites should be automated. When uploading documents, user session will no longer expire. Automate the process and alter the file size to the website's specifications. With a single click, you may completely fill out the form, including all documents and information.

We may upload documents in a single click using Quick Fill, which saves time and effort. This can be accessed from every gadget via user's authorization, and verification work for other websites will be simple owing to the use of digital memory.

This Quick Fill Help in uploading purpose, can be used as a platform of verification of details and documents, Universal storage, can store the documents as well as text details like name addresses, it can be used for verification and uploading purpose from a small website to a large website and platforms, can be a best way to identify a person with details and documents.

OBJECTIVES:

1. To increase the time efficiency while uploading the documents
2. Less Effort for uploading
3. Remote access and use of documents
4. Can be accessible from any device with user's login
5. To Verify other websites for details
6. To provide Universal storage, to store the documents as well as text details like name addresses

7. To verify and upload documents from a small website to a large website and platforms.
8. To identify a person with details and documents.

DIAGRAM:

STEP 1: creating Sky locker ID and updating Document in it.

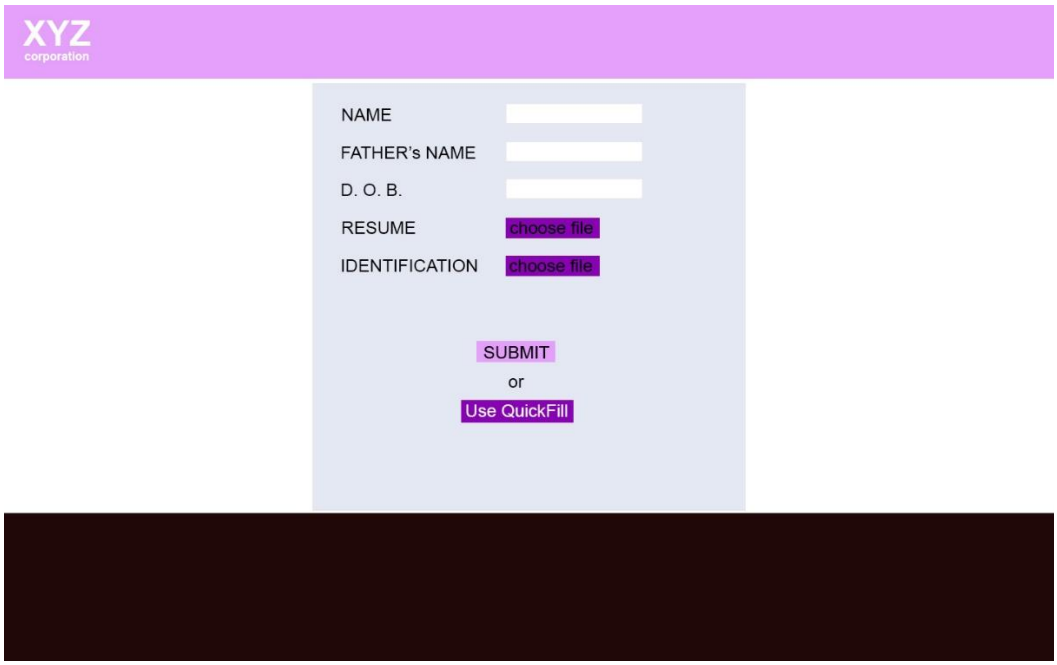

- Create a user id on Sky locker by registering our phone number that is linked to our Aadhaar first the Sky locker will reassure it by checking it with the government websites then after registering we need to enter our further details and submit it.
- Then we need to upload our documents one by one with verification that the documents belong to that certain person.
- And once we upload our documents in the Sky locker then we can use the Quick Fill platform for easy access to documents and easy uploading with proper authentication.
- Now, they are ready to be uploaded on different sites where the user wants to upload with users' permission.

STEP 2: USING QUICK FILL TO ENTER OUR DETAILS DIRECTLY FROM SKYLOCKER.

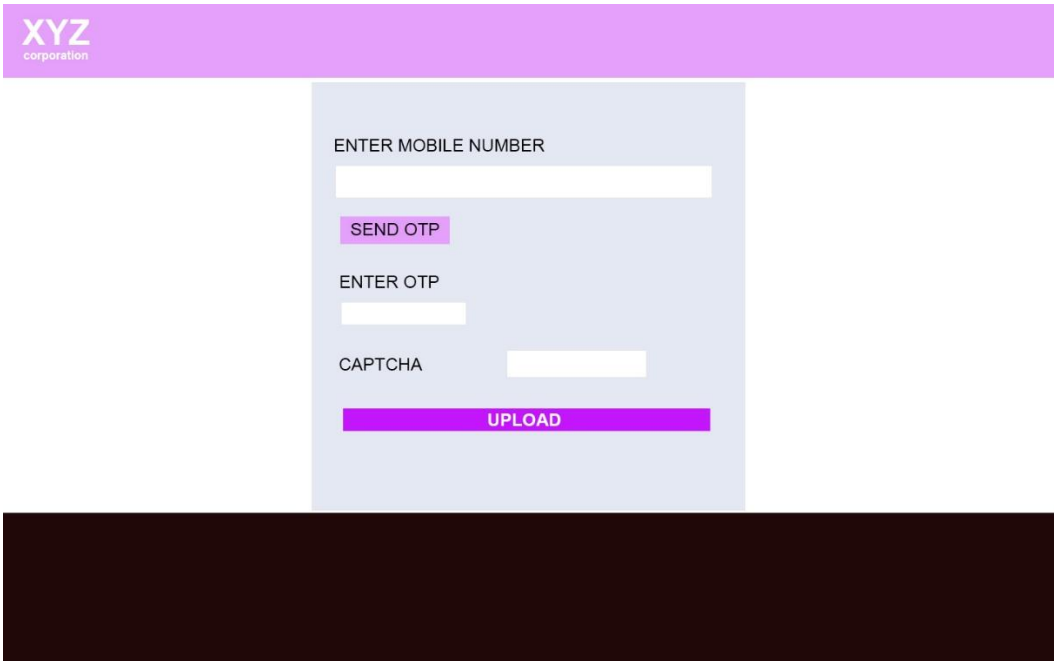

- Use Quick Fill option will be available on different websites which will use our API to get the users' data.
- Using that option, the users can upload all the required documents of the form filling websites with just one click if they have an account in Quick fill and uploaded those required documents their once.
- The backend operation will start by clicking that option and the user will be redirected to the authentication page where they need to log in to their account and also OTP verification will be done.
- After the completion of authentication our Quick Fill server will receive a request for document access using API.
- The request API will contain the user's login status and the OTP verification status, if the API request contains the true data of OTP verification and user's login then only a temporary access link will be generated where the details of the required documents will be present.
- Now the website where the user needs the documents to be uploaded, will use the temporary access of the generated link and take all the documents and data and upload them to their database.
- This way the documents will be successfully uploaded and no manual uploading of files and filling of details will be done.

Basic template design and flow chart

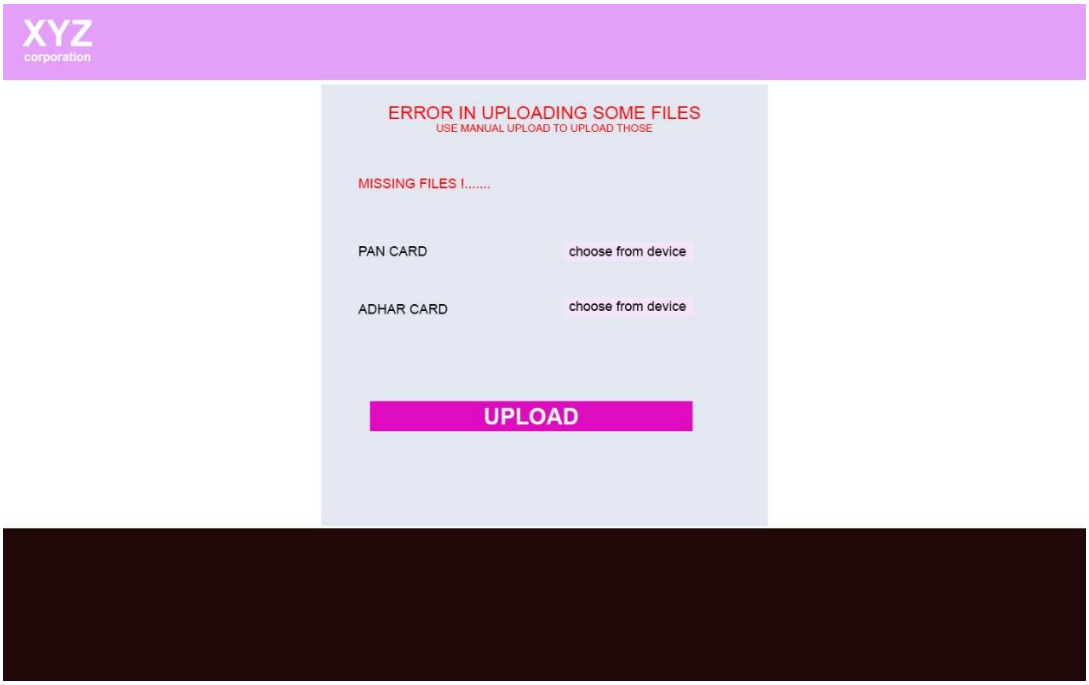

Option to use QuickFill

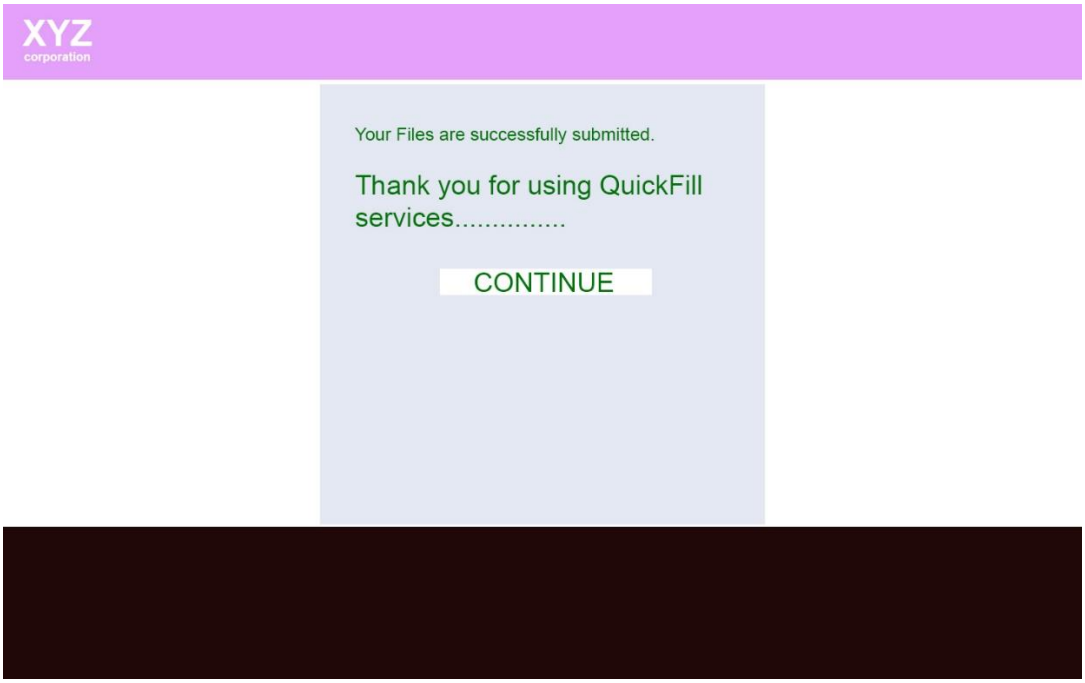

Verification of the user

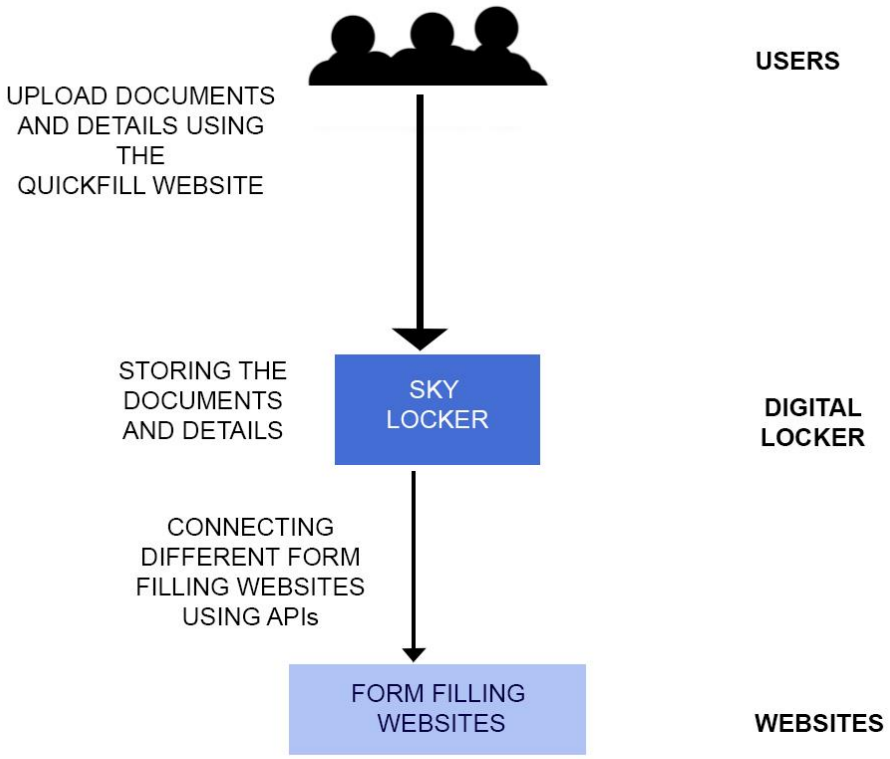

On clicking the files will be uploaded and details will be filled if any files failed to upload it will give error message now user can upload the files manually from device

When the files and details will be successfully uploaded by the QuickFill platform

Basic Structure of the QuickFill working system

CLAIMS

1. QUICK FILL USING SKY LOCKER AND DIGITAL STORAGE a cutting edge technology.

2. QUICK FILL USING SKY LOCKER AND DIGITAL STORAGE of claim 1, wherein said it is a smart communication system.

3. QUICK FILL USING SKY LOCKER AND DIGITAL STORAGE of claim 1, wherein said it minimizes human intervention and human-caused errors.

4. QUICK FILL USING SKY LOCKER AND DIGITAL STORAGE of claim 1, wherein said that a low cost and effective method is proposed.

5. QUICK FILL USING SKY LOCKER AND DIGITAL STORAGE of claim 1, wherein said it identify the elements that influence on Clay Soil Stabilization System.

6. QUICK FILL USING SKY LOCKER AND DIGITAL STORAGE of claim 1, wherein said this paper attempts to explain the concept, and assess its impact.

7. QUICK FILL USING SKY LOCKER AND DIGITAL STORAGE of claim 1, wherein said his paper has many applications.

8. QUICK FILL USING SKY LOCKER AND DIGITAL STORAGE of claim 1, wherein said we analyzed and discussed various aspects.

9. QUICK FILL USING SKY LOCKER AND DIGITAL STORAGE of claim 1, wherein said that proposed system is more accurate and fast.
